

### **Care Instructions:**

TO GET THE BEST RESULTS FROM YOUR CANDLE AND FOR SAFETY, THESE INSTRUCTIONS NEED TO BE FOLLOWED.

- When burning your Scented Lane candle for the first time, it is important to let your candle burn to the very edge of the glass, this will take a couple of hours depending on the size of the candle. Soy wax has a 'Memory' and if you do not allow the candle to do this it will burn down the centre of wick, this is called 'Tunneling' and the wax will remain around the side of the glassware.
- Burn the candle for no longer than 4 hours at any one time. Always burn the candles on a heat safe surface. Keep candle away from drafts and windows.
- Before re-lighting your candle always trim the wick, so there is approximately 5cm remaining. This will help your candle to last longer.
- When extinguishing your candle never put it out by using the lid, if you do this your candle will be left with a smokey smell. Always use a wick dipper. Blowing your candle out will create smoke.
- Never let your candle burn right down to the base of the glass as this can cause the glass to shatter, always leave as least 1cm of wax in the base of the glass.
- Never leave the candle unattended. A lit soy candle should always be within your sight. Place on a protected heat resistant, dry surface, and away from things that can catch fire, and Out of reach of Children and Pets.
- Do not touch or move the candle whilst burning.
- After use, and after the candle has cooled, replace the black metal lid to protect the candle from dust. The lid can also be used as a coaster when the candle is burning.

Please note that all fragrance oils, due to their raw materials, may discolour. This is normal.
